

Global Nuclear Concepts

REVOLUTIONIZING FASHION WITH NUCLEAR POWER

Former Ralph Lauren Global Manufacturing & Sourcing Manager, Rickey Ruff, aims to eliminate fossil fuels from Fashion Manufacturing by retrofitting every apparel, footwear, & accessories factory in the world with a micro nuclear reactor which will bring carbon emissions to net zero. Rickey launched Global Nuclear Concepts to leverage the mass appeal of Fashion becoming the onramp for ubiquitous participation in the fight against Climate Change.

It is the scientific consensus that the balance of the entire ecosystem has been disrupted. In addition to this, according to the United Nations Department of Economic and Social Affairs, the world's population is projected to reach 9.8 billion people by the year 2050. The demand for energy is outgrowing our ability to meet it and of all the solutions to the current climate crisis, most fall short of what is necessary to meet this demand. Global Nuclear Concepts is translating climate change commitments into actionable goals that immediately displace oil, coal, and gas with nuclear power. If you're ready to be part of the solution, visit our website, follow our social media, offset your carbon, and join the National Carbon Registry.
